							36	(37)					

The *Foundation New Age Calendar* is a solar calendar for which a given day of the year occurs on the same day of the week, month, and month day, every year. For example, day number 354 is always Wednesday, December 25. A given date always falls on the same day of the week, e.g., December 25 always falls on a Wednesday. In other words, there is only one version of the *Foundation New Age Calendar* – it is the same for all years. It is also the case that a given day of any month falls on the same weekday, e.g., the 13th of every month is always a Friday. Each quarter has exactly the same number of days, except the fourth quarter, which has one additional day in non-leap-years and two additional days in leap years (years divisible by 4 except for centenary years not divisible by 400). December 37 occurs only in leap years. Solstices occur on first day of first and third quarters (or on the preceding day). Equinoxes occur on first day of second and fourth quarters (or on the preceding day). Winter solstice in the Northern Hemisphere is the first day of the year (or the preceding day). January 1, Year 0 of the New Age (New Era, or NE) is December 22, AD2003 of the Gregorian solar calendar. Source: *Foundation* (<http://www.foundation.bw> or <http://www.foundationwebsite.org>).
